TABLE OF CONTENTS FOR "PULSE TECHNIQUES"

Ya. S. Itskhoki

[Based on the author's 1947 - 1948 lecture course at the All-Union Correspondence Institute of Power Engineering and intended to clarify methods of analyzing pulse phenomena.]

TABLE OF CONTENTS

	Page
Preface	3
Introduction	5
I. Influence of Pulse Electromotive Force on Linear Networks	
1. Pulse Voltages and Currents and Nature of the Processes Produced by Them in Electric Circuits	9
2. Methods of Mathematical Analysis of Pulse Processes	19
3. Operational Method of Transients	22
4. Duhamel's Integral	27
5. "Constant Subtangent" Method for Graphs	31
6. Superposition Theorem for HF Oscillation Envelopes	33
7. Spectral Composition of the Pulse Process	38
8. Spectra of Certain Pulse Electromotive Forces	43
a. Rectangular Pulse	43

	Page
b. Single Pulse	45
c. Exponential Pulse	46
d. Triangular and Trapezoidal Pulses	46
e. Bell Pulse	46
f. Relation Between Spectra of Video and Audio Pulses	50
9. Spectrum Method of Analyzing Linear Electric Circuits	52
10. Conditions Governing Undistorted Transmission of a Pulse Through a Linear Circuit	57
II. Pulse Transformation by Means of Linear Circuits	
11. Pulse Transformer	68
a. General Information	68
b. Equivalent Schematic Diagram of a Transformer Circuit	75
c. Distortion of a Transformed Pulse Front	81
d. Magnetization of a Pulse Transformer Core	86
e. Influence of Eddy Currents on Operation of Core	92
f. Calculating Pulse Transformers	98
g. Structure of Pulse Transformers	99
12. Differential Circuits (Shortening Circuits)	102
13. Integrating Circuits (Lengthening Circuits)	110
III. Shaping (Generation) of Pulses	
14. Shaping Properties of Lines Considered as Systems With Uniformly Distributed Parameters	115
a. Transients in Long Lines	115
b. Shaping Properties of Line Sections	118
c. Double Lines	120
15. Artifical Shaping Lines	123
a. Artificial, Chain Line	123
b. Delay Lines	126
c. Shaping Circuit in the Form of Resonant Circuits Connected in Parallel	127
d. Shaping Circuit in the Form of Non-resonant Circuits Connected in Series	131

		Page
16.	Blocking Oscillator	134
	a. General Description of Blocking Oscillator Processes	134
	b. Conditions Governing Blocking Oscillator Self-excitation	140
	c. Dynamic Characteristic and Amplitude of Generated Pulses	144
	d. Duration of the Flat Portion of Pulses	149
	e. Pulse Recurrence Frequency	151
	f. Alternative Schematic Diagrams for Blocking Oscillators	152
	g. Special Features in Construction and Operation of Blocking Oscillators	154
	h. Decoupling Circuit	155
17.	Operating Conditions and Types of Blocking Oscillators	157
	a. Synchronizing Blocking Oscillator Operation ("Lock-in" or "Frequency Division")	157
	b. Blocking Oscillator With Tuned "Loop" Circuit (Self-Oscillation)	159
	c. Blocking Oscillator With Shaping Lines in the Grid Circuit (Delayed Action)	164
18.	Multivibrators	167
	a. Multivibrator With Self-excitation	167
	b. Frequency Synchronization and Division	175
	c. Electronic Relay	176
19.	Conversion of Sinusoidal Oscillations by Means of a Nonlinear Element	180
	a. Utilizing an Electron Tube as a Nonlinear Conversion Element	180
	b. Application of Heavily Saturated Transformers (Peaking Transformers)	181
IV.	Pulse Modulation of HF Oscillations	
20.	Pulse Modulation (General Considerations)	184
21.	Intermittent Generation of HF Oscillations (Self-Modulation)	186
22.	Plate Modulation	188
23.	Grid Modulation	189

V. Generation of Modulating Power Pulses

24. Requirements for Modulated Voltage Pulses 193

25. Basic Principles of Power Pulse Generation 197

a. Power Transformers With Capacitive Energy Storage 198

b. Power Transformers With Inductive Energy Storage 210

VI. Types of Switching Devices

26. General Requirements for Switching Devices 215

27. Electron Tubes 217

28. Rotary Discharger 224

29. Trigatrons 231

30. Thyratrons 240

31. Nonlinear Inductance 244

VII. Types of Pulse Modulators

32. Classification of Modulators 247

33. Modulator With Inductive Energy Storage 249

a. Schematic Diagram and Working Principles 249

b. Shape of Modulating Pulse and Calculation of Basic Modulator Parameters 250

c. Selecting Operating Conditions for Switching Tubes 255

34. Ignition Pulse Generator 259

35. Modulator With Partial Discharge of Storage Capacity, Switched by an Electron Tube 262

36. Modulator With Shaping, Delay Lines and Thyratron Switch 271

37. Modulator With Delay Lines Forming Pulses in the Charging Stage 272

38. Modulator With Nonlinear Inductance as a Switching Device 276

VIII. The Modulators of Certain Radar Stations

39. Modulator of Land Radar Detection Station AN/TPS-3 279

40. Modulator of an Aircraft Interceptor Radar Station 281

41. Modulator of a Shore Radar Station 282

42. Modulator of a Gun Laying Station 285

Conclusion 287
